### DETAILED ACTION

Claims 1-7 are pending.

#### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to a collection of genomic DNA clones, classified in class 536, subclass 23.1.
- II. Claims 5-7, drawn to a process of generating a gene-targeted animal using a clone obtained from the collection according to any of claims 1, 2, 3, or 4, classified in class 800, subclass 21.
- III. Claims 5-7, drawn to a process of generating a gene-targeted cell using a clone obtained from the collection according to any of claims 1, 2, 3, or 4, classified in class 435, subclass 455.

#### The inventions are distinct, each from the other because:

Invention I and Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the genomic clones can be used in materially different processes such as the process of generating a gene targeted transgenic non-human animal as in Group II, producing the polypeptide of a DNA clone, or in a micro-array for studying gene expression. In addition, the clone need not have been in the claimed collection in Invention I in order to be used in the method of Invention II or III.

Art Unit: 1635

Invention II and Invention III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to different processes. A cell (e.g. bacteria or yeast) comprising a genomic DNA clone is not capable of use for generating a gene-targeted animal. The gene-targeted animal has a different mode of operation, different function, and different effect than a cell comprising genomic DNA clone.

Claims 5 and 7 link(s) inventions II and III. The restriction requirement between the linked inventions is subject to the non-allowance of the linking claim(s), claims 5 and 7. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or non-statutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Because these inventions are distinct for the reasons given above and the search required for each Group is not co-extensive, restriction for examination purposes as indicated is proper.

It would be unduly burdensome for the examiner to search and consider patentability of all of the presently pending claims, a restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 § 1.17(h).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Whiteman whose telephone number is (703) 305-0775. The examiner can normally be reached on Monday through Friday from 8:00 to 5:00 (Eastern Standard Time), with alternating Fridays off.
